DETAILED ACTION

Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance:

The prior art of record fail to teach a combinational limitation of system for providing telecommunication service between a plurality of users, comprising:

a first network operable to communicate media in at least one encoding format;

a second network operable to communicate media in at least one encoding format;

a gateway, operable to:

receive a call setup message from the first network, the call setup message signaling for a media channel for transporting media between a first device and a second device;

identify a first encoding format for the media communicated with the first network;

determine a second encoding format for the media communicated with the second network;

if the first encoding format and the second encoding format are different:

determine whether a count included in the call setup message is greater than a predetermined value~ wherein the count indicates a number of transcoding points on the media channel;

in response to determining that the count is greater than the predetermined value, reject the call setup message; and

in response to determining that the count is not greater than the predetermined value:

increment the count;

identify a remote element to receive the call setup message; and
transmit the call setup message to the remote element.

Shaffer et al. (US 6324409) teaches a system and method for optimizing telecommunication signal quality by determining a minimum number of new conversions, herein referred to as transcodings, necessary in voice connections, on a system wide basis. However, Shaffer fails to disclose the combination limitations of identify a first encoding format for the media communicated with the first network;

determine a second encoding format for the media communicated with the second network;

if the first encoding format and the second encoding format are different:

determine whether a count included in the call setup message is greater than a predetermined value~ wherein the count indicates a number of transcoding points on the media channel;

in response to determining that the count is greater than the predetermined value, reject the call setup message; and

in response to determining that the count is not greater than the predetermined value:

increment the count;

identify a remote element to receive the call setup message; and
transmit the call setup message to the remote element.

Therefore, claim 1-6, 8-15, 17-24, 26-33, and 35-37 are allowed.
